

What Peer Announcements Tell Us About the Size of the Bitcoin P2P Network

Matthias Grundmann, Hedwig Amberg, Max Baumstark, Hannes Hartenstein

What is the Size of Bitcoin?

\$39,846.13

Bitcoin Price [1]

403,984 MB

Blockchain Size [2]

\$758,296,996,808

Market Cap [1]

15,519

Reachable Peers [3]

?

Total Number of Peers
in the P2P Network

19,030,631

Total Circulating Bitcoin [1]

250,160

Transactions per Day [2]

<https://coinmarketcap.com/currencies/bitcoin/> [1]

<https://www.blockchain.com/charts#currency> [2]

<https://bitnodes.io/> [3]

Motivation

Counting Peers in the P2P Network

OPEN

for incoming connections

Reachable Peers

*We can connect to
reachable peers and
count them*

*See <https://bitnodes.io> and
<https://dsn.kastel.kit.edu/bitcoin>*

Collect addresses
known by peers in
the P2P Network

CLOSED

for incoming connections

Unreachable Peers

*We cannot distinguish
whether there is an
unreachable peer or
no peer at an address*

Estimating Number of Unreachable Peers

Run reachable peers and observe
unreachable peers that connect to them.

See Wang, L., Pustogarov, I.: Towards Better
Understanding of Bitcoin Unreachable Peers.
arXiv:1709.06837 (Sep 2017).

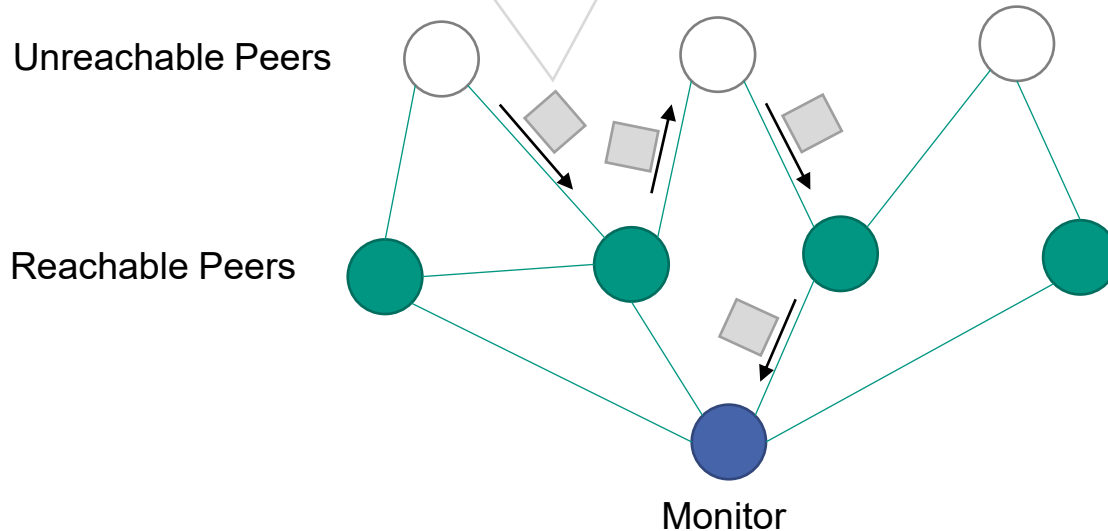

or

Observe peer announcements sent by
unreachable peers.

Peer Announcements

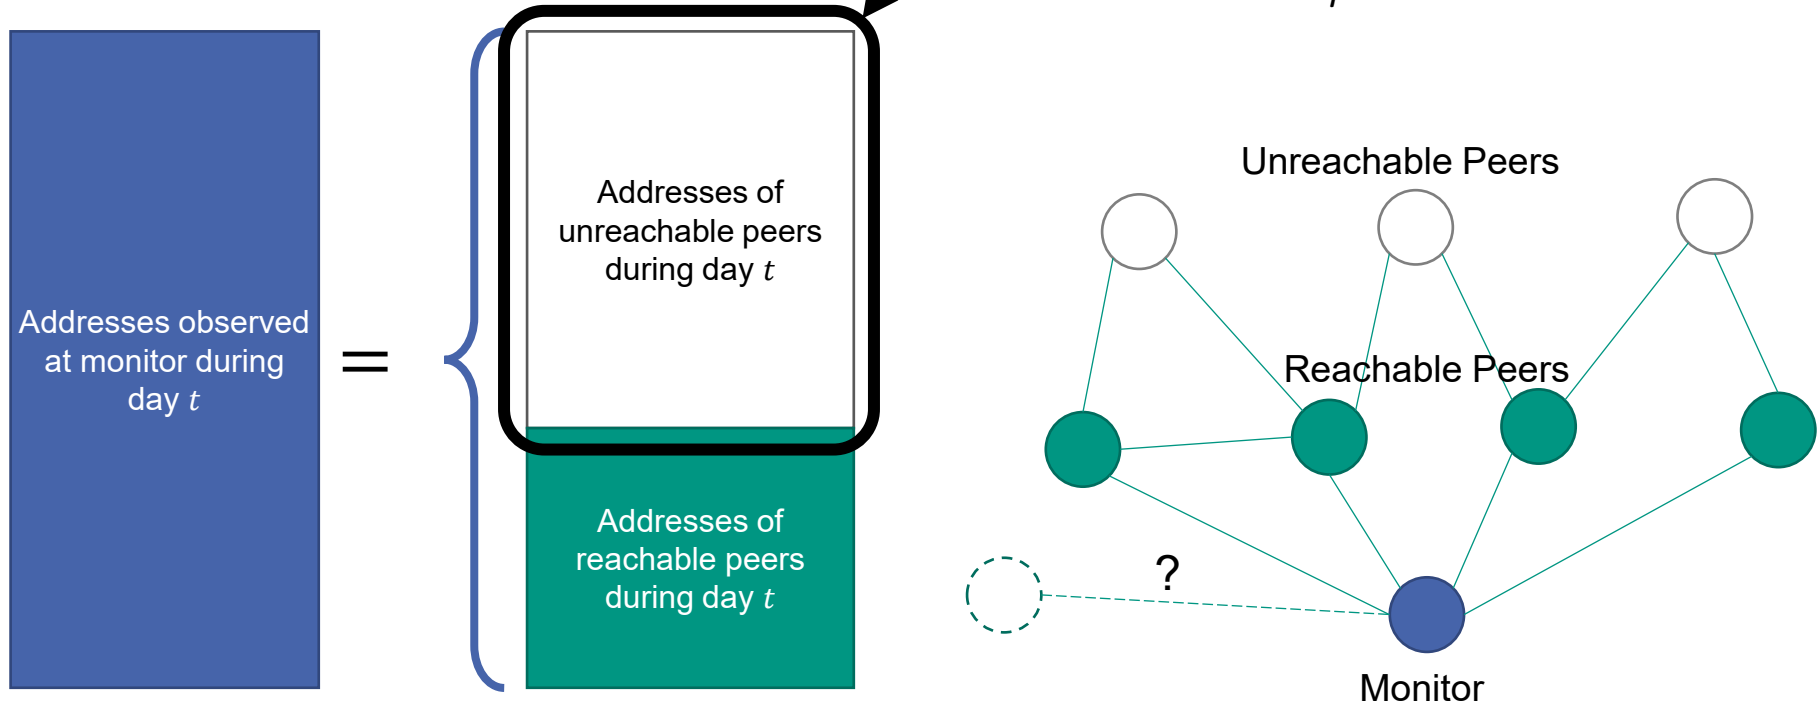

Address: 129.13.189.200
Timestamp: 7/19/2022 12:43 PM
Service Flags: 101101101

- Peers regularly announce their address to their peers.
- Peers forward peer announcements until they are older than ten minutes.
- With a global monitor, we can observe peer announcements.

■ Passive Announcement Listening (PAL) Method:
 Estimate set of unreachable peers from peer announcements observed at global monitor.

Data Analysis

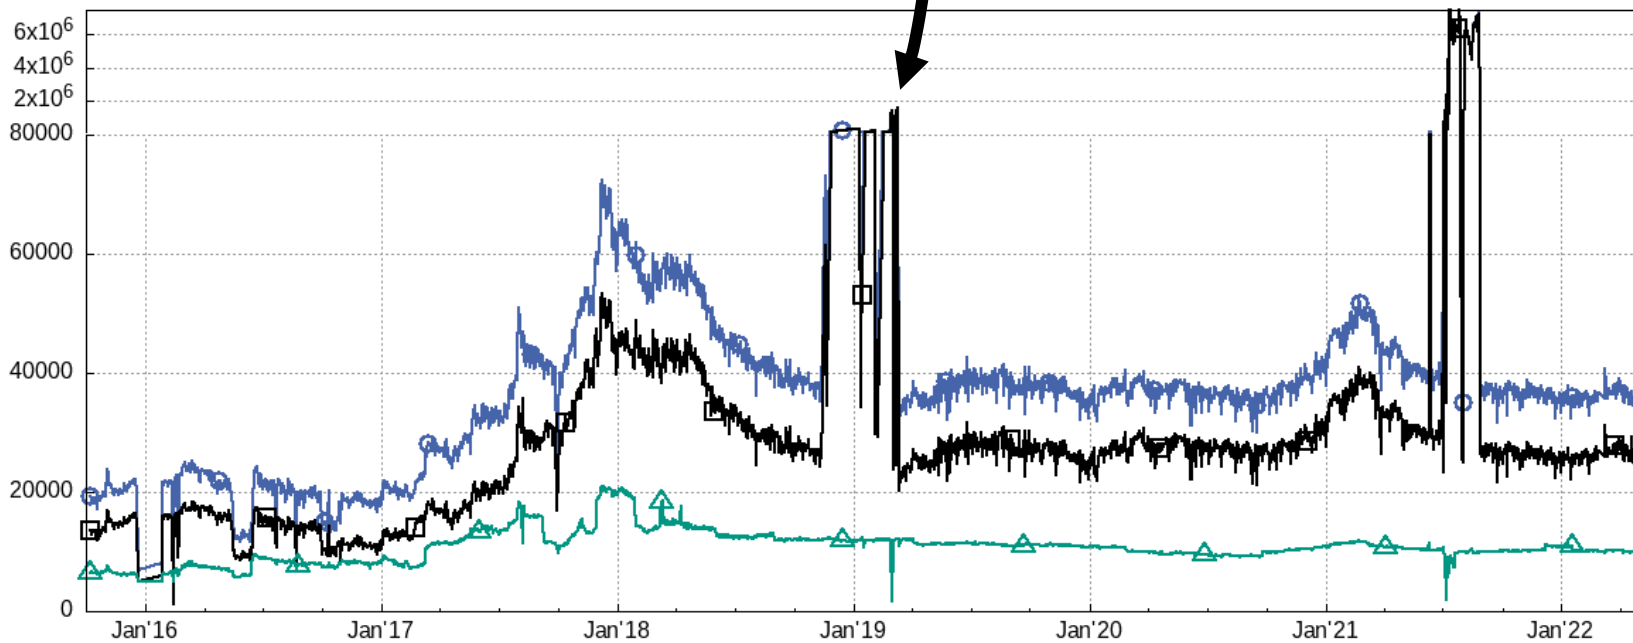

Measurements

Spam of bogus addresses
Analyzed in "On the Peer Degree Distribution of the Bitcoin P2P Network". Grundmann, Baumstark, Hartenstein. IEEE ICBC 2022

Number of addresses observed at monitor per day 
Number of addresses of unreachable peers per day 

Number of reachable addresses per day 

*Currently,
about
26,000
unreachable
peers*

Validation

The monitor observed the addresses of 95 % of **reachable peers** per day.

A **second monitor** in a different location observed on average 96 % the same addresses.

The address of one of our **own unreachable peers** was observed on 94 % of days.

The monitor observed the addresses of 94 % of the unreachable peers that announce themselves and connected to our **own reachable peer**.

Conclusion

- Passive Announcement Listening Method observes addresses of unreachable peers.
→ Estimation of about 26,000 unreachable peers that announce their address
- Only about 75 % of unreachable peers announce their address
→ We estimate that there are currently about **35,000 unreachable peers**.
- Continuously updated results at <https://www.dsn.kastel.kit.edu/bitcoin/#addresses>
